

POWERING FLUORESCENCE IMAGE- GUIDED SURGERY TO ADVANCE SURGICAL PRECISION.

DC Platforms enable a new standard in fluorescence-guided surgery (FGS) to provide surgeons with improved visualization of critical anatomy.

This company provides intuitive and ergonomic solutions for the integration of precise fluorescence image-guided surgery. A perfect fit for DC based on our HC market expertise.

In their system, the imager lights up the surgical field with a wavelength that excite a fluorescent substance joined to specific cell types, allowing the surgeon to identify cell types.

TECHNOLOGY USE CASE: A A8104 / Data/Image Processing
